SUMMARY

Backend & AI Engineer with 3+ years building fintech, ticketing and AI automation platforms in C#/.NET and Python. Core developer on a ground-up rebuild of EasyPay, one of Armenia's largest consumer payment platforms, and author of Vault, the secrets-management service behind all 5 Panda Tech projects. Most recently built production multi-agent LLM pipelines in Python running thousands of autonomous research and outreach operations per day.

EXPERIENCE

Flux Technologies — Backend & AI Engineer Aug 2025 – Aug 2026 | Yerevan, Armenia

- Built the backend of an AI-powered B2B marketing automation platform for cold email outreach, serving international clients, in Python.
- Engineered multi-step autonomous agent pipelines on the Claude and DeepSeek APIs, running **1,000 company analyses and 1,000 personalised email sends per day**, fully automated with no manual research step.
- Delivered campaign management systems for creating, scheduling and tracking large-scale email campaigns.
- Automated the outreach flow end to end, from prospect research through personalised copy generation to delivery and reply tracking.

Panda Tech — Software Developer Jul 2023 – Aug 2025 | Yerevan, Armenia

- **EasyPay (fintech):** Core developer on a ground-up rebuild of Armenia's EasyPay payments platform — **1M+ app installs, 800+ billable services** — designing the APIs, business logic and Entity Framework Core data layers over SQL Server.
- **Vault:** Built the internal secrets-management service backing **all 5 Panda Tech projects across 15 environments** (3 per project), removing manual DevOps handover from the deployment path.
- **Ticketing platform:** Delivered end-to-end venue, event and ticket-sales systems, including the full admin panel.

Flux Technologies — Software Developer Intern Jun 2022 – Sep 2022 | Yerevan, Armenia

- Completed an intensive .NET internship covering C#, SQL and Entity Framework, shipping assigned backend tasks into the team codebase.

PROJECTS

Lumio Booking — Founder & Lead Developer SIDE PROJECT Mar 2026 – Present | Yerevan, Armenia

- Designed and shipped the full backend for a salon booking and management platform serving Android, iOS and Web clients from a single .NET API; live with **10+ salons**.
- Built AI agents handling scheduling assistance, automated client conversations and dynamic slot optimisation.
- Own the product end to end: data modelling with Entity Framework Core, REST API design, deployment and production support.

TECHNICAL SKILLS

AI & Agentic Engineering: Python, AI Agent Development, Multi-Agent Pipelines, Agentic Workflows, LLM Automation, Prompt Engineering

Backend & Architecture: C#, .NET, ASP.NET Core, Entity Framework Core, RESTful APIs, Microservices, System Design

Databases & Platforms: SQL Server, PostgreSQL, Cross-Platform Backends (Android, iOS, Web), Secrets Management
